## product features

Product presentation is a critical element of successful retailing. Precision offers a range of retail shelving systems that are attractive yet functional, and allow retailers to customise units to maximise storage and product presentation.

**"Retail Light" shelving is used when lighter product is displayed, such as in convenience food stores.**

"Retail Heavy" shelving can be used in situations where heavier merchandise is being displayed, for example supermarkets and DIY stores.

"Retail High Bay" shelving provides display and storage over retail display shelving and is typically used in areas with higher ceilings, such as mega centres.

"Retail Racking" is ideal for display of heavier or bulkier items, or can be used for back of house storage. Rebated beams take either timber or steel shelf inserts

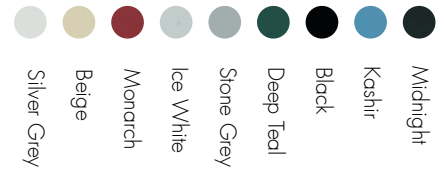

**Available in a variety of heights and depths.**

Shelves can be fitted horizontal or angled for specialist displays. Extensive range of accessories to meet all display requirements.

Note: All products & specifications are subject to change without prior notice.

Colours are as accurate as printing processes will allow. Standard Colours may change over time.

### Standard colours
